SUMMARY

Final-year B.Tech Computer Science student (CGPA 8.81) with Java as my primary language and a strong grounding in object-oriented programming, data structures and SQL. I build full-stack web applications with REST APIs, relational and NoSQL data models, and JavaScript frontends. Eager to apply this foundation to cloud CRM development: building business logic, data models and integrations that solve real customer problems.

EDUCATION

Dayananda Sagar University, Bengaluru 2023 – 2027
B.Tech, Computer Science & Engineering — **CGPA: 8.81**

Mother Teresa's PU College, Kundapura **94.1%**
12th Standard, Karnataka Board

Mother Teresa's Memorial School, Kundapura **96.96%**
SSLC, Karnataka Board

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, TypeScript, Python, C, HTML/CSS
Web & Backend: React.js, Next.js, Tailwind CSS, Node.js, FastAPI, REST API design
Databases: PostgreSQL, MySQL, MongoDB (schema design, joins, aggregation)
Tools: Git, GitHub, Docker, Postman, VS Code, Linux

EXPERIENCE

Data Annotator Intern — IITM Pravartak Technologies Foundation Oct 2024 – Apr 2025 | Remote

- Verified and cleaned text extracted from Supreme Court legal documents to build NLP training datasets.
- Transcribed and validated audio for speech-to-text model training, following strict accuracy and formatting guidelines.
- Delivered consistent, high-accuracy data on deadlines while working independently with a remote team.

PROJECTS

StashIT — Temporary File Sharing Platform

- Built a dontpad-style web app where users create a shared space with just a name and password to store and retrieve files temporarily.
- Designed REST APIs in FastAPI for creating spaces, authenticating access and handling file upload/download.
- Modelled spaces and file metadata in MongoDB and built a React frontend for the end-to-end user flow.

Blockchain-Based Blue Carbon Registry & MRV System (Team Project)

- Co-built a registry to record and verify blue carbon (mangrove) credits for multiple stakeholders.
- Architected as four independently deployable services, integrated via APIs: React/Vite frontend, Node.js backend, Google Earth Engine ML pipeline, and ERC-721 smart contracts on the Polygon Amoy testnet.
- Co-authored a paper on the system, published by Springer (IDBA 2026).
